CHEMICAL RESISTANCE

Please verify valve material if using strong or aggressive chemicals in its application. Chemical resistance information is available at <http://www.hydraelectric.com/h/chemical-resistance>.

GENERAL INSTALLATION REQUIREMENTS

MINIMUM OPERATING PRESSURE:	0.2 Bar, for effective closure of diaphragm to valve seat
MINIMUM DIFFERENTIAL PRESSURE:	0.2 Bar, min pressure differential between inlet and outlet of valve
INLET MATING CONNECTION:	Maximum torque setting 4.0 Nm
WATER QUALITY:	Solenoid valves are designed for use on potable clean water systems, excessive particulates can cause failure. Avoid direct connection to hot water boilers which may cause excess build up of calcium deposits
INLET FILTER:	0.4 mesh filter must be fitted up stream of the valve; failure to use a filter upstream of diaphragm can cause failure
SERVICE LIFE:	50,000 operations under hot and cold water conditions, service life will vary according to local water conditions and temperature. Mean Time before Failure (MTBF) has been tested with first defects after 450,000 cycles, under following conditions, Water temperature 30°C, Ambient 25°C, Dynamic Pressure 5 Bar, Static Closing pressure 10 Bar, Duty Cycle 3min ON, 3min OFF

MOUNTING

All 3/4BSP inlet ports are provided with the option for M4 steel Mounting Brackets.

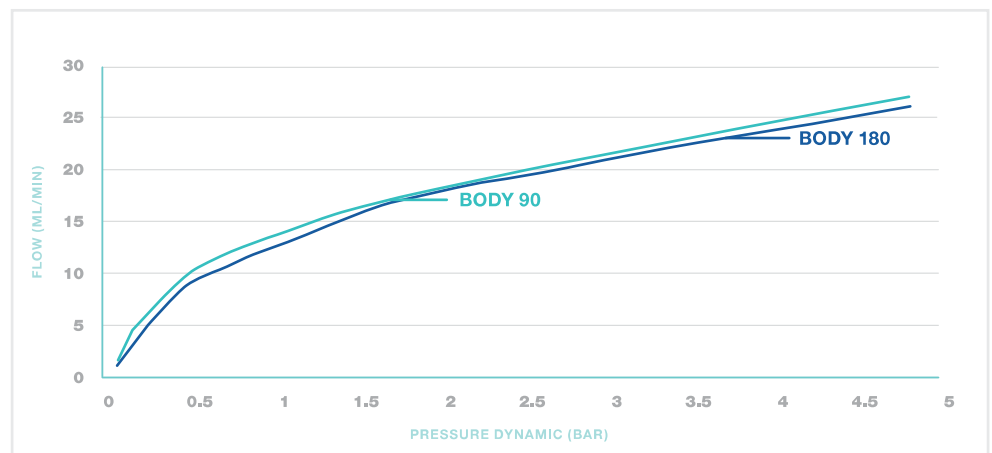

FLOW

The graph represents typical flow curve for solenoid valve without restriction on the outlet and dynamic inlet pressure between 0 and 5 Bar.

Note:

*Maximum flow rate is 20 lit/min.
above this value the valve may fail to
close after the coil is de-energised.*

SOLENOID VALVE RANGE

CHEMICAL RESISTANCE

A flow regulator can be fitted to the inlet and outlet ports to provide constant flow with an inlet pressure range of 1 to 10bar.

The flow regulator is composed of a plastic housing with studs onto which a rubber seal is located. Flow is controlled by pressure acting on the washer thus restricting the gap between the stud and water passage.

NON RETURN VALVES

Pilot operated solenoid valves have a low resistance to back siphoning; a spring loaded resilient non return cartridge (WRAS Approved) can be fitted to the 3/4BSP inlet port variants only.

STANDARDS

The Solenoid Valves range is subjected to compliance testing and approval to following standards,

- **WRAS: Water Research Advisory Scheme (Hot & Cold Water)**
- **ENEC: European Safety Mark EN 60 730-2-8**
- **UL & CSA Underwriters Laboratories Inc**
- **RoHS: European Directive 2002/95/EC**
